## III International Matrix Course

Anatomical Cohesive  
Silicone Gel Implants in  
Aesthetic and Reconstructive  
Breast Surgery

June 18th and 19th 2005  
Grand Hotel  
Stockholm, Sweden

In connection with ISAPS "Nordic Light  
Course" 16 June – 18 June, 2005

## Course Objective:

- To provide a rationale for how to select the ideal implant in breast augmentation surgery. Contrary to the traditional breast augmentation, implant selection is recommended to be less arbitrary and more based upon measurements focusing on the dimensions and proportions of the thorax and breast. Emphasis will be placed on preoperative evaluation, measurements and markings.
- To provide an in depth demonstration of different surgical techniques both for subglandular and submuscular augmentations as well as for mastopexy – augmentation and breast reconstruction with anatomical implants.
- To provide a rationale for the use of anatomical implants in breast reconstruction. The indications, advantages as well as disadvantages and complications will be discussed in details

## Points Covered:

- Implant selection based on preoperative measurements and patient desires.
- The rationale for anatomically designed implants. - The advantages of cohesive silicone gel implant filling.
- The importance of a large abundance of variation in implant height width and projections for ideal outcome of the procedure.
- Surgical techniques in submuscular and subglandular implant placement
- Modified surgical technique and important considerations in secondary cases
- Preoperative markings and surgical steps
- Asymmetrical breast their evaluation and treatment
- The combined mastopexy-augmentation. Preoperative evaluation, markings and surgical technique
- Complications and their treatment
- Anatomical implants in breast reconstructions
- Breast reconstruction with and without flap cover

## Preliminary Program

Saturday June 18th 2005

*Welcome*

*Lecture:*

*The Matrix system: Introduction.*

*Breast Reconstruction with anatomical implants*

*Patient selection and preoperative planning.*

*Complications and Problem cases*

*Live Surgery-DVD-presentation:*

*Surgical technique: Breast reconstruction*

*Evening:*

*Welcome and get together party*

Sunday June 19th 2005 Morning :

*Morning: Breast augmentation (primary and secondary, subglandular and submuscular). Analysis of the female breast. Preoperative evaluation and Surgical Technique.*

*Postoperative management.*

*Mastopexy Augmentation and Asymmetrical Breasts.*

*Secondary breast augmentation*

*Complications and Problem Cases*

*Afternoon:*

*Live Surgery-DVD- Presentations*

*Surgical technique: Submuscular and Subglandular Breast augmentation. Secondary breast augmentation. Mastopexy augmentation*

## General Information

Course Organisation

Congrex, Stockholm

Official Course Language:

English

Registration Fee:

	Before March 1st	After March 1st
MD	4500 SEK	5500 SEK
Residents*	2500 SEK	3500 SEK

The ISAPS course “Nordic Light Course” will be held at Grand Hôtel, Stockholm, Sweden from 16 June – 18 June, 2005. Registration to both courses receive a 500SEK price reduction per course

\*Residents are required to produce certificate signed by the Head of the Department

Registration fee includes:

Certificate of Attendance, Course Material, Lunch, and Welcome party (Spouse price 300 SEK)

Participation limit: 400
